Sivan Lasri

Software Engineer

Kiryat Ata, Israel | 054-230-0207 | Sivanlasri4@gmail.com | linkedin.com/in/sivan-lasri-a05924230 | github.com/SivanSoftware

B.Sc. Software Engineering • Ranked 1st out of 63 • GPA 93.47 • President's Honor List

PROFILE

Software engineer who builds end to end, from the data model through the service and API to the interface people use. At an AI startup I ship production features in React and Next.js over a NestJS service and PostgreSQL on GCP, owning each one from the requirement through to the production incident. I teach C# weekly at Israel's national cyber education programme, and on my graduation project, which scored 99 and ranked 1st in my year, my team drove an AI agent into the codebase through an MCP server over the Unity editor. On my own I published a fault-tolerant distributed platform in Java with replicated storage, a clustered message bus and a Raft consensus layer, covered by 68 tests in CI.

TECHNICAL SKILLS

Languages Python, Java, C#, C, C++, TypeScript, JavaScript, SQL, Bash

Web React, Next.js, Angular, Node.js, NestJS, .NET, REST APIs, Webhooks, Message Queues, Microservices

Data PostgreSQL, MySQL, SQL Server, MongoDB, Firebase

Cloud & DevOps GCP, Docker, Terraform, CI/CD, GitHub Actions, Git, Linux

Testing & AI JUnit, Mockito, CTest, automated test suites in CI | Claude Code, Codex, MCP, agentic workflows, LLM integration

EXPERIENCE

Software Developer

DealFlow (Siftt AI) • Tel Aviv • 2026 - Present

- Build features end to end in React / Next.js over NestJS and PostgreSQL, deployed on GCP Cloud Run with Terraform and CI/CD.
- Built an external messaging integration driven by job queues, with rate limiting, a scheduled daily report and an engagement dashboard.
- Investigate and fix defects in production, from symptom through logs to root cause; take part in design discussions and code review.

Programming Instructor

Magshimim, national cyber education program • 2024 - Present

- Teach C# (.NET) and Java-based programming, and review student code for correctness, efficiency and data-structure choice.

PROJECTS

Mulligan - Fault-Tolerant Distributed System

Java • github.com/SivanSoftware/mulligan-parking-system

- 3-node MongoDB replica set and 3-node RabbitMQ cluster with quorum queues, in Docker Compose, so any single node can fail without losing data.
- Consensus cluster on Raft (Apache Ratis) tolerating one failed node and one malicious node.
- Red-team / blue-team hardening: required TLS, fail-closed HMAC signing, cross-node replay protection, least-privilege ACLs. Covered by 68 JUnit and Mockito tests in CI.

WaterVision VR - Multi-User Platform

C#, Unity, MCP • Graduation project, grade 99, ranked 1st

- Set up an MCP server over the Unity editor and drove it from Claude Code through a bridge process, so the agent acted on the project directly - editing C# behaviour scripts and building and arranging scenes - instead of returning code for one of us to paste. It became the team's day-to-day toolchain, and every change it made was reviewed before it entered the project.
- Scrum Master of a five-person team. Integrated a locally-run Whisper speech-to-text model and built an audit and logging system to reconstruct a session.

EDUCATION

B.Sc. in Software Engineering

Kinneret Academic College • 2022 - 2026

Ranked 1st out of 63 | GPA 93.47 | Final-year average 98.56 | President's Honor List, 2025

Standout grades Digital Systems 100 (1st) | Machine Learning Lab 100 (1st) | Computer Networks 98 (1st) | OOP 97 (1st) | Data Structures 95 (1st) | Databases & SQL Server 92 (1st)

Languages Hebrew: Native | English: Fluent
